JULIE'S BICYCLE

A GUIDE TO NAVIGATE AI ETHICS IN CREATIVE PRACTICE

RESOURCE GUIDE

This resource was created in response to requests from freelance practitioners, small creative organisations, and third sector leaders for a rider and ethical questions regarding AI use. It aims to articulate values and boundaries for sharing with venues, collaborators, and funders, focusing on climate justice and addressing concerns about AI in creative practices. For context on all things AI **delve into our blog series** for practical insights and tips.

JB

In this resource pack, you'll find:

- An AI rider you can tailor to guide you in setting your AI north star.
- A set of questions by way of an ethical anchoring for how you might choose to engage with AI or not.
- A suggested framework for setting up accountable or advisory groups, which may work well for small organisations, project teams or creatives working with a myriad of communities who want to make collective, ethics-based and informed decisions about using it.
- Resources to better understand the environmental, climate and justice centred impacts of AI.

AI RIDER

Here you will find a template of a rider that speaks to your preferences for engaging with AI. Like a Green Rider or an Access Rider, it should work to define your values, needs and boundaries. We recommend you bring this up at contracting stage, perhaps in conversation about the work you are going to undertake with the venue/producer/org-anisation.

JB

This template serves as a rider to outline your preferences for engaging with AI.

You can send it prior to signing contracts or use it as a tool for negotiation. It may also be shared on your website or social media to express your personal values.

Feel free to adapt it to fit your needs and include supporting resources from the pack.

MAPPING YOUR AI WORK

Our framework of thought-provoking questions have been designed to help shape your sustainable AI ambitions and use. As a starting point we have highlighted three core questions to start with alongside a free resource.

JB

What questions should we be asking then?

Underneath the efficiency gains and the many promises of AI, there are perhaps the bigger questions and considerations that we might want to start with such as:

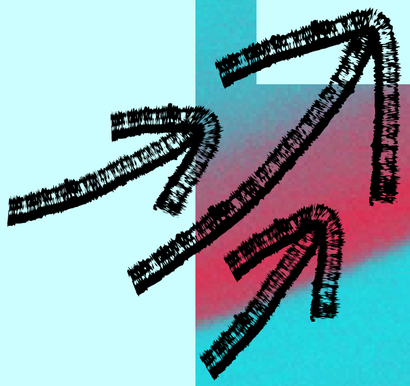

1. What are we really consenting to as creatives engaging and enmeshing with AI? (What do we value and what do we stand to lose?)
2. Who is this for and who is it serving - financially, systematically and ethically?
3. Will AI really be part of just futures and climate solutions?

LAND, WATER & CARBON

Understanding the resource footprint of AI is becoming essential for anyone using digital tools in creative and climate-aligned practice. This section brings together useful resources, news and practical tips to help you navigate the land, water and carbon impacts of AI systems — from how data centres consume energy and cooling water, to what responsible use looks like in everyday workflows.

WHO PAYS FOR AI?

Climate action must be equitable and reparative, ensuring that minoritised communities and relationships with the natural world are central to the movement. The following resources and insights shine a light where it needs to be shone, exposing the true environmental and human footprint of artificial intelligence while empowering artists and institutions with practical, action-driven solutions.
